Where do users drop off?

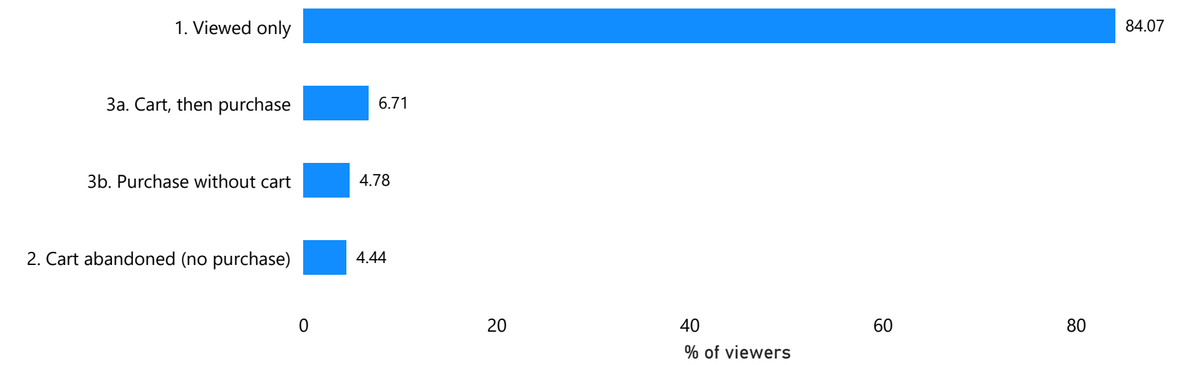

October 2019, 3.0M viewers, 41.6% of buyers never trigger a cart event.

Viewers	Cart users	Viewers who bought %
3020723	336961	11.49%

Strict funnel: 11.15% of viewers reach the cart

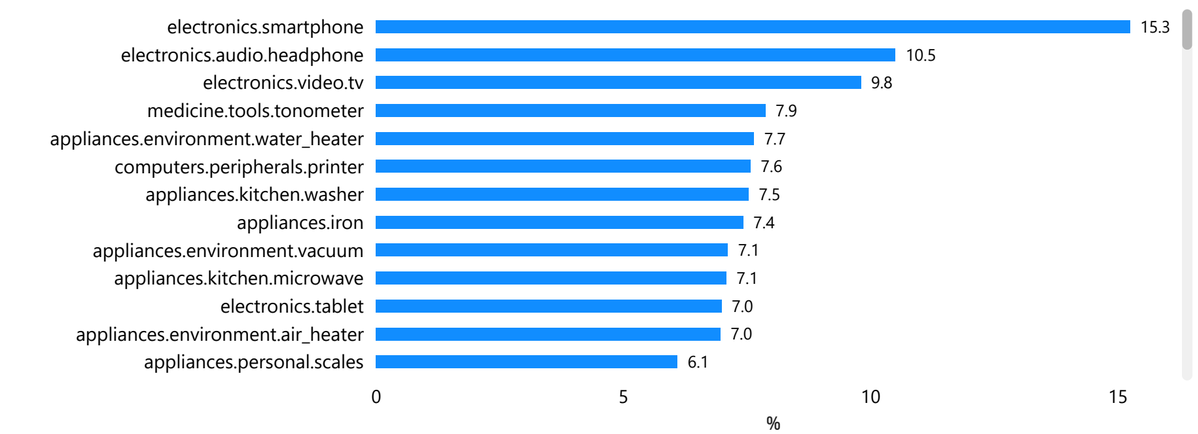

84% of viewers only browse, 4.4% abandon a cart

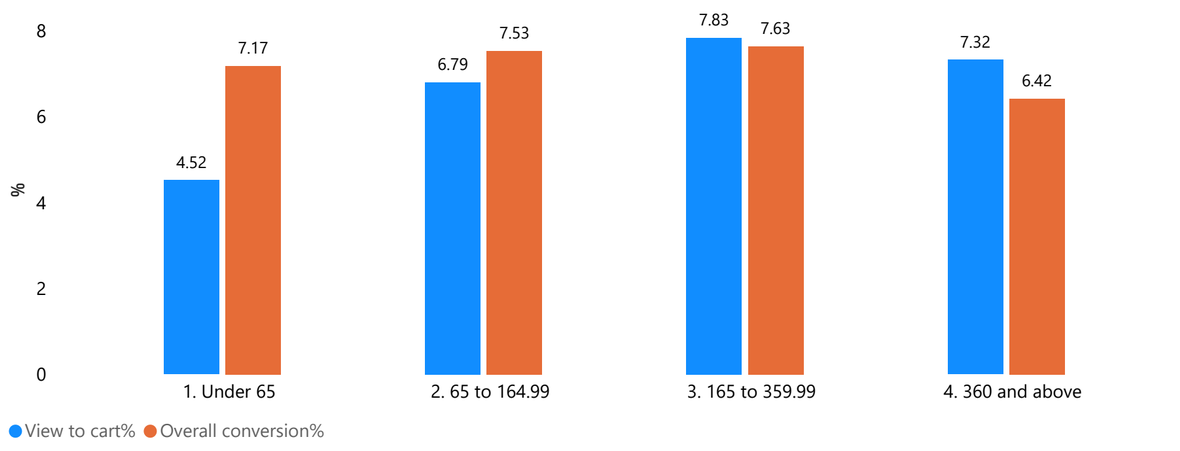

Smartphones convert best to cart (15%), headphones and TVs follow

Apparel has no cart events at all

Cheap items rarely reach the cart, the top band converts worst overall

Who is worth keeping?

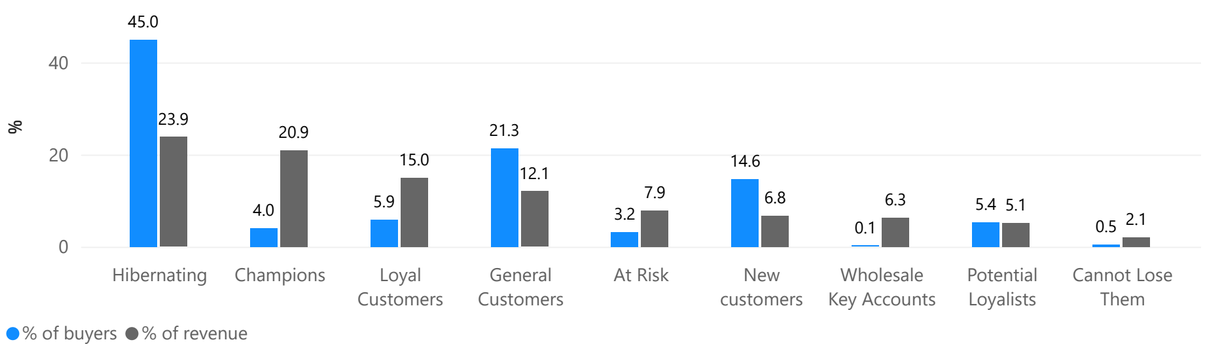

347,118 buyers in 9 segments. Hibernating is 45% of buyers, but each buyer is worth half the average.

Buyers
347,118

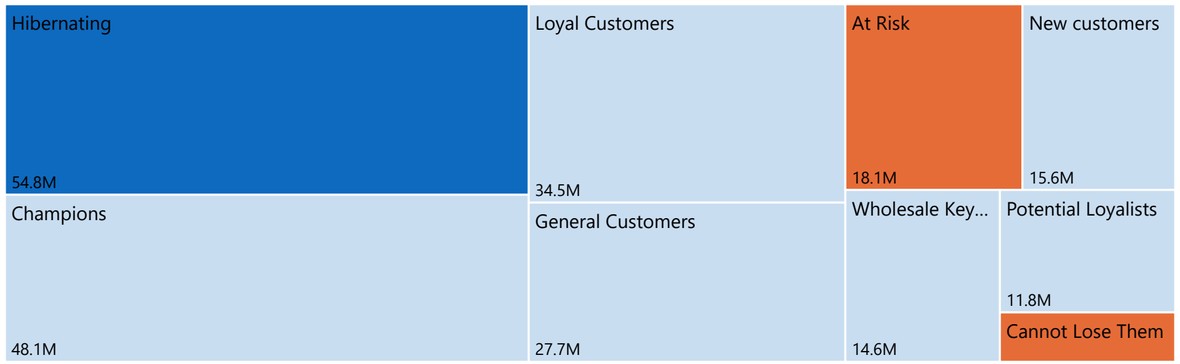

Revenue
229.9M

Never purchased (viewers)
2,673,669

Hibernating is 45% of buyers but 24% of revenue

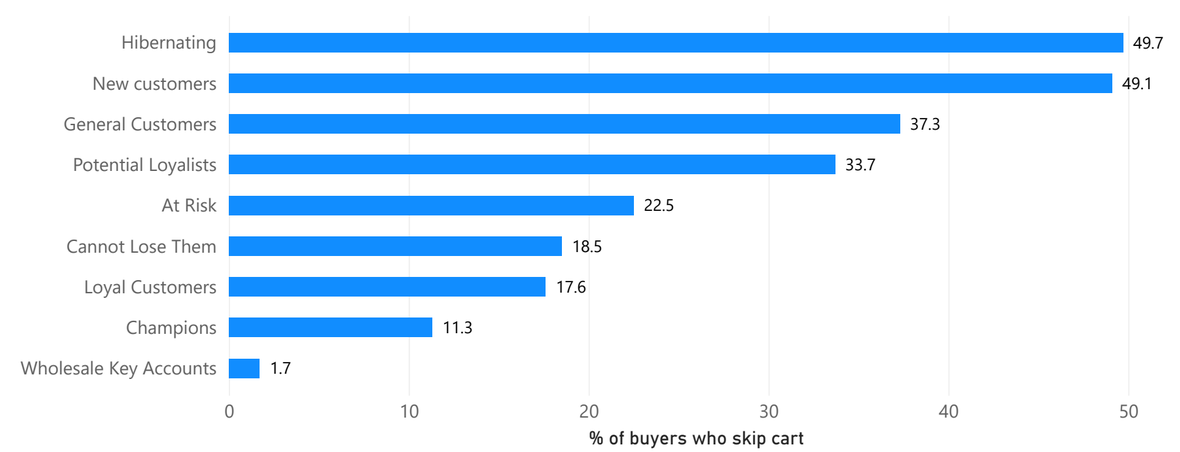

Hibernating, Champions and Loyal bring about 60% of revenue

Value per buyer: Wholesale, Champions, and Cannot Lose Them stand out

Segment	Buyers	Revenue	Avg spend per buyer	Avg recency (days)	Avg purchases	Value index
Wholesale Key Accounts	348	14,588,268	41,920	4.4	32.8	63.3
Champions	13,955	48,074,696	3,445	3.5	7.9	5.2
Cannot Lose Them	1,776	4,751,221	2,675	25.1	5.4	4.0
Loyal Customers	20,491	34,521,352	1,685	8.1	4.2	2.5
At Risk	11,087	18,081,601	1,631	19.3	4.0	2.5
Potential Loyalists	18,584	11,794,972	635	4.0	2.0	1.0
General Customers	74,039	27,697,930	374	11.1	1.3	0.6
Hibernating	156,045	54,838,165	351	22.4	1.2	0.5
New customers	50,793	15,585,008	307	4.1	1.0	0.5

About half of Hibernating and New buyers skip the cart, Champions and Wholesale rarely do

Is At Risk + Cannot Lose Them a better target than Hibernating?

Verdict: partly supported: Better value per contact, but a modest advantage that depends on unknown response rates.

Value per contact ratio

1.4x

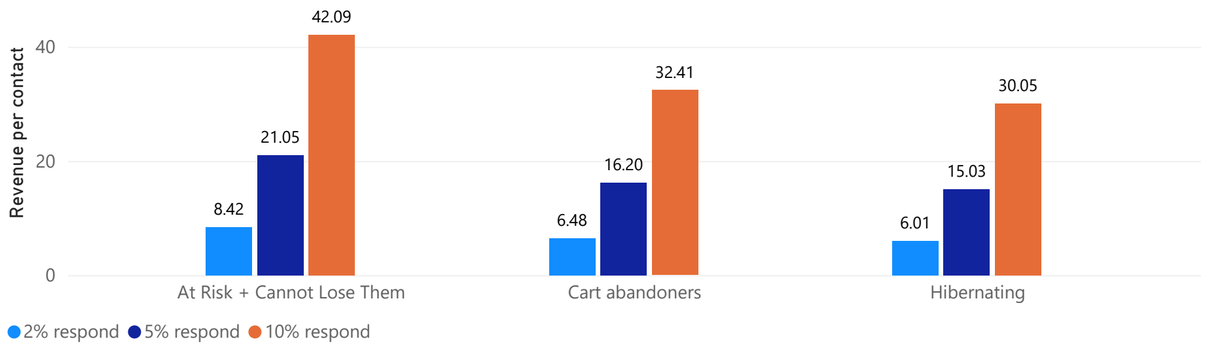

Hibernating response needed to At Risk at 5%

7.0%

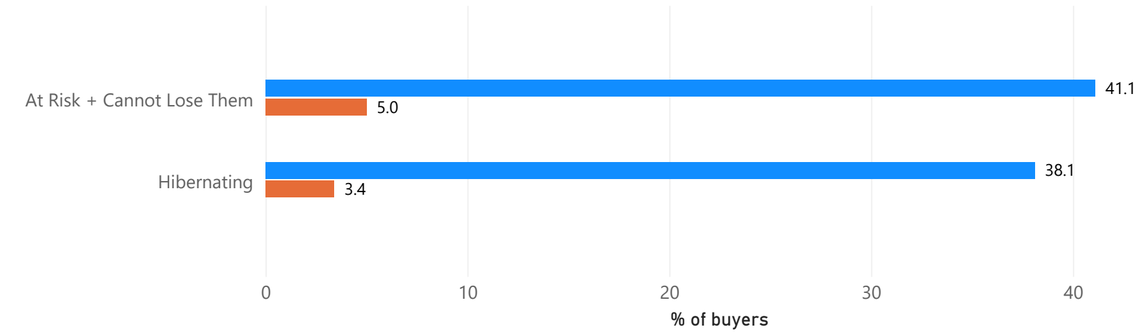

Abandoner revenue pool at 5% recovery

2.18M

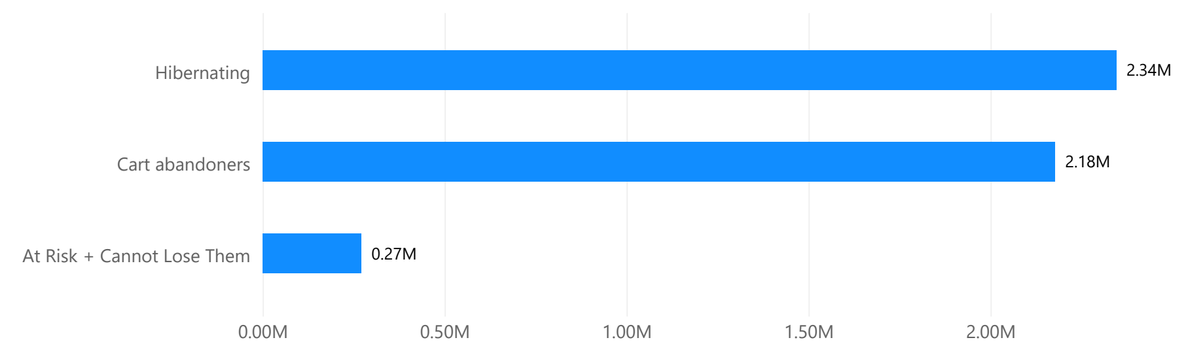

Revenue per contact at 2%, 5% and 10% response: At Risk leads

Since Oct 18, 41% of At Risk buyers browsed, against 38% of Hibernating

In total at a 5% response rate, Hibernating and cart abandoners hold far more revenue than At Risk

What would have overturned the hypothesis?

1. Hibernating matches At Risk per contact: Not overturned. At a 5% response rate, At Risk + Cannot Lose Them earn 21.05 per contact against 15.03 (1.4x). Hibernating would need about 7% to match.

2. At Risk buyers show little recent browsing: Not overturned, only weak support. 41.1% browsed since Oct 18, against 38.1% of Hibernating (carted: 5.0% vs 3.4%).

3. Their drop-off is no worse than other segments: Not directly testable, because segments contain only buyers. Proxy: 78% of At Risk + Cannot Lose Them bought through the cart, against 50% of Hibernating.

Limits: response rates are assumptions, there is no contact data, revenue is gross (not profit), and the data covers one month.

Next step: A/B test.

Values are copied from SQL outputs (files 16 and 17). Abandoner per-contact values = response rate * average cart item price (324.07)
